

CUTAKERB

CUTAKERB is used for the removal of kerbs, concrete cutting, step detail and slot making in bituminous materials.

Cutakerb can cut 300mm wide and up to 400mm deep.

Arisings are left in-situ making access to properties possible immediately after the kerb has been removed.

Milled arisings are generally 40mm down in size — suitable for use in recycling or as hard core.

The manoeuvrability of the machines is ideal for radii and small, awkward areas.

Cutakerb is an adapted W1000 Wirtgen 1.0m planer on wheels, making movement around site easy and safe without any damage to existing surfaces.

We look forward to hearing from you.
